

Wakanda Jobs Technical, Sales & Marketing Playbook

A practical founder operating system for someone who builds well but does not enjoy selling

Wakanda Jobs · 8 June 2026 · Confidential

The direct advice

You do not need to become a charismatic salesperson. You need a small, measurable system that creates conversations, follows up consistently, demonstrates results and asks for a clear next step. Your technical strength can make this system unusually efficient, but only if you stop using development as a substitute for customer contact.

Founder rule
Do not build another major revenue feature until you have personally completed 50 employer conversations, delivered 10 employer pilots and recorded why each prospect bought or declined.

1. Your current growth assets

Asset	Current position	How to use it
Employer email audience	1,224 usable addresses; 490 Zambia and 307 South Africa	Targeted, low-volume employer outreach and newsletters
Employer WhatsApp audience	102 normalized numbers; 48 Zambia and 22 South Africa	Personal follow-up after relevance and consent checks
Newsletter audience	884 subscribers	Candidate alerts, career services and referral campaigns
Job supply	22,724 jobs; 15,203 added in 30 days	SEO, social content and proof of market coverage
Company database	5,403 companies	Account research, prioritization and partnership prospecting

Asset	Current position	How to use it
GA4	Installed, but no visible custom conversion events	Build real acquisition and purchase funnels
Broadcast systems	Email and Whapi broadcast functionality exists	Structured campaigns with suppression and frequency limits
Employer analytics	Job views/referrers/countries already available	Create results reports that help close renewals

2. Technology priorities

Build a simple commercial data layer first

The platform has transaction tables but no clear CRM pipeline. Add a small sales module or integrate a lightweight CRM. Every prospect should have one record, one owner, one next action and a complete contact history.

Priority	Technical deliverable	Why it matters
P0	Lead/contact table with company, contact, source, country, stage, owner, value, next_follow_up_at, last_contacted_at, consent status and notes	Prevents leads from disappearing and makes follow-up measurable
P0	Communication log for email, WhatsApp, call and meeting outcomes	Creates an auditable sales history and avoids duplicate outreach
P0	Suppression list, opt-out link/keyword, invalid-contact status and frequency cap	Protects reputation and reduces spam/compliance risk
P0	GA4 events for signup_start, signup_complete, cv_upload, employer_register, job_post_start, checkout_start, purchase, vip_whatsapp_click and career_service_lead	Shows exactly where users drop out
P0	UTM persistence from landing page into account/order/payment records	Connects revenue to campaigns
P1	Admin funnel dashboard by product, country, source and week	Replaces guesswork with a weekly operating view
P1	Automated follow-up tasks after no reply, pilot expiry, checkout abandonment and subscription expiry	Consistency without relying on memory
P1	Employer pilot result report: views, applications, channels, countries and recommendations	Turns delivery data into a renewal sales tool

Priority	Technical deliverable	Why it matters
P1	Lead scoring based on recent vacancies, posting frequency, country and contact quality	Focuses your limited time on likely buyers
P2	A/B testing and feature flags for offer, price and CTA experiments	Lets pricing improve based on evidence

Technical measurements to implement

- Acquisition: source, campaign, landing page and cost.
- Activation: candidate registration plus CV upload; employer registration plus company setup.
- Commercial intent: WhatsApp inquiry, checkout start, package view, pilot request and demo request.
- Revenue: paid order, collected amount, product, country, source and first-time versus repeat buyer.
- Retention: subscription renewal, VIP alert renewal, repeat service purchase and employer posting again.
- Quality: valid contact rate, email bounce, WhatsApp failure, application quality and employer satisfaction.

Engineering work to avoid right now

- Do not add more package types until the current packages have consistent buyers.
- Do not build a complex AI matching engine before collecting enough candidate preferences and employer outcomes.
- Do not expand into more countries commercially until Zambia sales messaging converts.
- Do not build a custom enterprise CRM if a basic internal pipeline or inexpensive CRM works.
- Do not automate cold WhatsApp blasts at scale. Use relevance, consent controls, small batches and human follow-up.

3. A sales process for a non-sales founder

Use diagnostic selling. Your job is not to persuade everyone. Your job is to find employers with an active vacancy, understand the hiring problem, offer a small pilot and measure the result.

Stage	What you do	Exit condition
1. Research	Choose a company with a current vacancy and identify the role, country and likely hiring contact.	You can explain why the message is relevant
2. First contact	Send a short personalized message asking one simple question.	Reply or follow-up date recorded

Stage	What you do	Exit condition
3. Discovery	Ask about role urgency, current channels, applicant quality and decision process.	Problem, decision-maker and timeline known
4. Pilot offer	Offer to distribute one vacancy and send a result report.	Pilot accepted with clear scope and expiry
5. Delivery	Publish, distribute, monitor and send a concise outcome report.	Employer has seen measurable value
6. Close	Recommend one package based on hiring frequency.	Paid, declined with reason, or dated follow-up
7. Retain	Check quality, ask about next vacancies and request a referral/testimonial.	Renewal, expansion or referral

The five questions to ask employers

- Which role is hardest for you to fill right now?
- Where are you currently advertising it?
- Are you struggling more with applicant quantity or applicant quality?
- When do you need the person to start?
- If we deliver relevant applicants, how often does your company normally recruit?

Simple pricing conversation

Do not list every package. Recommend one. Example: "Because you hire one or two roles each month, I recommend Rising Star at K650 per month. We can start with this vacancy as the pilot, show you the results, and only continue if it is useful."

4. Copy-and-use sales scripts

First WhatsApp message

Script

Hi [Name], I noticed [Company] is hiring a [Role]. I run Wakanda Jobs. We distribute vacancies across our job platform and job-alert channels. I would like to promote this vacancy as a short pilot and send you a results summary. Who handles recruitment for this role?

First email

Subject

[Company] - support for your [Role] vacancy

Hi [Name],

I saw that [Company] is recruiting a [Role]. Wakanda Jobs currently tracks thousands of active vacancies across African markets and distributes matching jobs through our platform and alert channels.

I would like to run a small pilot for this vacancy and send you a report showing reach and applications. There is no long meeting required. If the result is useful, I can recommend an ongoing package.

Are you the right person to discuss this with?

Regards,

[Your name]

Wakanda Jobs

+260 970 766 123

Follow-up after three working days

Script

Hi [Name], following up on the [Role] vacancy. I can prepare the pilot posting from the public vacancy details, then send it for your approval before distribution. Would that be useful?

After pilot results

Script

The vacancy received [views], [applications/clicks] and distribution across [channels]. If you expect more hiring this month, I recommend [Package] at [Price]. It covers [benefits]. Shall I activate it for the next vacancy?

Objection: we already use another job board

Response

That makes sense. I am not asking you to replace it. Let us test Wakanda Jobs as an additional channel for one vacancy and compare the reach and applicant quality.

Objection: no budget

Response

Understood. Let us keep the first pilot limited. If it produces useful candidates, we can discuss a package for future roles. If not, there is no reason to continue.

Objection: send information

Response

I will send a one-page summary. To make it relevant, are you mainly hiring entry-level, professional or management roles, and how many vacancies do you normally have each month?

Referral request

Script

Who is one HR manager or business owner you know who is currently hiring? An introduction would help us prove the service with more employers.

5. Your weekly sales routine

Protect one fixed hour every weekday for selling before development work. The routine below is intentionally small enough to sustain.

Day	Founder sales block	Output
Monday	Select and research 15 employers with active Zambia vacancies.	15 prioritized leads
Tuesday	Send 10 personalized emails and 5 relevant WhatsApp messages.	15 first contacts
Wednesday	Follow up previous leads and hold discovery calls.	5 follow-ups and 1-2 calls
Thursday	Prepare/deliver pilots and send result reports.	1-2 active pilots
Friday	Ask for payment, renewal, testimonial or referral; review metrics.	At least 2 direct commercial asks

Minimum weekly scorecard

50 researched leads, 25 personalized first contacts, 15 follow-ups, 5 real conversations, 2 pilots and 1 paid conversion. Do not judge yourself by confidence; judge the process by completed actions.

6. Marketing strategy

Candidates: use content to build an owned audience

- Every public job page should push one main conversion: create a profile and upload a CV for faster applications and matching alerts.
- Publish a daily "Top jobs today" WhatsApp/social post linked to a tracked landing page.
- Send the 884 newsletter subscribers one useful weekly digest, not constant promotions.
- Run a referral campaign: both users receive a benefit only after the referred person completes a CV-bearing profile or purchases a service.
- Promote career services around pain signals: many applications, no callbacks, interview anxiety and poor CV score.
- Build country/category landing pages around actual search demand and measure signup conversion, not only page views.

Employers: account-based marketing

- Create a one-page employer landing page with one CTA: request a vacancy distribution pilot.
- Publish monthly hiring-trend snapshots using your job database and use them as conversation starters.
- Create short employer case studies showing vacancy, distribution, reach, applicants and result.
- Segment campaigns by country and sector. A mining employer should not receive the same message as a software startup.
- Use LinkedIn for research and credibility; use email for the first structured offer; use WhatsApp for relevant follow-up.
- Partner with HR associations, universities and business groups to borrow trust instead of buying all reach through ads.

Campaigns to run first

Campaign	Audience	Offer	Primary KPI
First Vacancy Pilot	Zambia employers with live vacancies	Managed posting and results report	Pilot-to-paid conversion
Jobs on WhatsApp	Candidates and newsletter subscribers	Personalized VIP alert trial	Trial-to-paid renewal
Not Getting Interviews?	High-application candidates	K100 CV review	Paid orders and turnaround

Campaign	Audience	Offer	Primary KPI
Graduate Launch	Universities and final-year students	Jobs channel plus CV clinic	CV-bearing registrations
Hiring Pulse Zambia	HR managers and executives	Free monthly trend summary	Employer leads and report inquiries

Paid advertising rule

Do not spend heavily until conversion tracking works. Start with K1,000-K2,500 monthly tests. Use candidate ads only for a specific action such as VIP trial, CV review or profile completion. For employers, direct outreach and partnerships should come before broad social ads.

7. What to delegate

Your highest-value founder work is product direction, key employer conversations, partnerships and measuring the funnel. Repetitive prospecting and follow-up should gradually move to someone else.

Role	When to add	Responsibilities	Compensation idea
Part-time sales development assistant	Now, after scripts and CRM fields are ready	Research contacts, personalize first lines, schedule follow-ups and maintain pipeline	Base stipend plus bonus per qualified meeting
Commission-based employer representative	After 3-5 founder-closed customers	Sell a proven package using case studies	Commission on collected first payment and smaller renewal commission
Career-services contractor	When weekly orders exceed founder capacity	CV reviews, rewrites and coaching to SLA	Fixed delivery fee per completed order
Customer success/operator	At 15-25 paying employers	Onboarding, reporting, renewals and support	Part-time then full-time

Do not outsource an unproven sales message

Close the first 5-10 employer customers yourself. Then document the calls, objections, package choices and successful language before hiring someone to repeat it.

8. Sales hygiene and compliance

- Use business contact details only for relevant business outreach.

- State who you are, why the message is relevant and how to opt out.
- Honor opt-outs immediately across email and WhatsApp.
- Do not repeatedly message non-responders; use a fixed sequence and then stop.
- Avoid bulk WhatsApp campaigns to scraped numbers without relevance or permission.
- Record the source and status of every contact and keep suppression data permanently.
- Validate local privacy, electronic communications and consumer rules before scaling campaigns across countries.

9. 30-day implementation sequence

Week	Technical work	Commercial work
Week 1	Create CRM schema/stages, suppression model and GA4 event plan.	Choose 50 Zambia leads and send first 20 personalized messages.
Week 2	Add UTM persistence and employer pilot request form.	Hold discovery calls and activate 3-5 pilots.
Week 3	Build employer result-report view and follow-up reminders.	Deliver pilot reports and ask for first subscriptions.
Week 4	Create weekly funnel dashboard and abandoned-checkout triggers.	Run VIP alert and K100 CV-review campaigns to owned audiences.

10. The only dashboard you need each Friday

Metric	Initial weekly target
Personalized employer first contacts	25
Employer follow-ups	15
Employer conversations	5
New pilots	2
New paid employers	1
Candidate registrations with CV	20
New paid VIP alert customers	5
Career-service orders	2
Cash collected	Increase every four-week cycle

Metric	Initial weekly target
Organic employer jobs	Move from 0 to at least 10 in 30 days

Final recommendation

For the next month, split your working time roughly 50% product/reliability, 30% direct customer conversations and partnerships, and 20% measurement/content. The commercial work will feel less comfortable than coding, but the platform now needs customer truth more than more features. A simple daily sales habit, supported by good instrumentation and follow-up automation, is the highest-return technical decision you can make.
