

Wakanda Jobs Performance, Monetization & Growth Plan

Production statistics, commercial priorities, forecasts and a 90-day path to revenue

Wakanda Jobs · 8 June 2026 · Confidential

Executive assessment

Wakanda Jobs has built a technically broad pan-African employment platform with a strong automated job-supply engine and multiple working monetization products. The project is not yet a mature marketplace: job supply is high, but direct employer participation, registered candidate depth and repeatable sales are still very low.

Bottom line

The project has product capability and early payment proof, but it needs a focused sales and conversion operation. For the next 90 days, do not add major new products. Sell the products already built, improve registration and attribution, and convert the existing company contact database into employer relationships.

1. Production snapshot

Metric	Current actual	What it means
Jobs in database	22,724	Large, current content base across Africa
Jobs added in last 30 days	15,203	High publishing velocity
Organic employer-posted jobs	0	Critical gap: no direct employer supply yet
Companies in database	5,403	Large prospecting and partnership base
Registered accounts	19 (15 candidates, 4 employers)	Very early owned audience
Applications	1,648	Strong activity, but concentrated in only 6 registered applicants

Metric	Current actual	What it means
Tracked job interactions	144,637	Demand signal exists; attribution needs improvement
Completed payment ledger	K2,059	Real willingness to pay, still pre-scale
Active employer subscriptions	1 worth K650	First recurring employer proof point
Active VIP WhatsApp alerts	4 worth K140	Working candidate-side product

Server-log context: over approximately six days, 73,920 successful requests remained after a basic user-agent bot filter, with 39,101 job-page requests and approximately 5,780 unique-IP observations across the daily log periods. These are directional traffic indicators, not verified users or sessions. Automated and crawler traffic is substantial.

2. What is working

- Job supply is expanding quickly: 15,203 jobs were created in the last 30 days.
- Geographic scale is real: South Africa, Nigeria, Kenya and Zambia are already producing meaningful inventory.
- Payment infrastructure works: eight completed payment records total K2,059, plus two pending records worth K675.
- One employer has activated a K650 monthly subscription, proving B2B payment willingness.
- Paid alert orders have generated K760 in approved order value; candidate alerts have delivered 468 messages.
- Career services have two orders, including one paid K219 order.
- The company database contains contact-email and phone arrays for almost every company, creating an immediate outbound sales asset.

3. Main constraints and risks

Constraint	Evidence	Commercial response
No direct employer supply	0 organic jobs out of 22,724	Offer a managed first-posting pilot and convert employers after results
Tiny registered audience	19 total accounts; only 4 resumes	Make registration and CV upload the primary conversion objective

Constraint	Evidence	Commercial response
Application concentration	1,648 applications from 6 registered applicants	Measure abuse/automation and diversify candidate acquisition
Weak June revenue pace	K65 completed in June to date versus K1,994 in May	Run daily sales activity and weekly revenue reviews
Product sprawl	Many monetization features but several have zero transactions	Prioritize 3 offers and pause new feature work
Traffic quality uncertainty	Large volume of bot, crawler and HTTP 410 traffic	Install session analytics and conversion funnels
Crawler dependency	100% of jobs are crawled	Build employer relationships and source diversification

4. Market coverage

Country	Jobs added in 30 days	Share of 30-day supply
South Africa	6,855	45.1%
Nigeria	2,473	16.3%
Kenya	1,417	9.3%
Zambia	1,148	7.6%
Mauritius	956	6.3%
Tunisia	690	4.5%
Morocco	431	2.8%
Zimbabwe	389	2.6%

South Africa is the largest immediate commercial market by supply volume. Zambia should remain the first relationship-sales market because local trust, WhatsApp usage and founder access can shorten the sales cycle. Nigeria and Kenya are the next expansion markets after a repeatable employer offer is proven.

5. Monetization priorities

Priority 1: Employer acquisition and subscriptions

Sell outcomes, not listings. The first offer should be a managed employer pilot: Wakanda Jobs posts the vacancy, distributes it to relevant channels, provides an applicant summary, and reports reach. The commercial

goal is to move successful pilots into the existing K650, K1,250 or K2,500 monthly plans.

- Target companies currently advertising repeatedly in the crawler database.
- Give one managed vacancy free or low-cost, with a clear expiry and a results report.
- Require employer registration and company verification before the second vacancy.
- Package sourcing, featured placement and candidate access into higher tiers.
- Set a weekly target of 50 contacts, 10 conversations, 4 pilots and 1-2 paid conversions.

Priority 2: VIP WhatsApp alerts

This is the simplest candidate offer to explain and already has operational proof. Sell personalized delivery and time saved. Keep the K40 weekly, K100 monthly and K150 two-month structure for now, but test a low-risk three-day or first-week trial that automatically prompts renewal.

- Place the VIP alert offer after application, registration and CV upload.
- Use the new dashboard promotion and add conversion tracking to the WhatsApp link.
- Collect role, location, experience and salary preferences before activating.
- Send renewal reminders two days before expiry and track renewal rate by plan.

Priority 3: Career services

Career services can create cash quickly without requiring marketplace scale. Promote CV review at K100 as the entry product, then upsell CV rewrite at K350, LinkedIn optimization at K300 and the K750 bundle. Target candidates with many applications but no recorded hiring outcome.

Secondary products

Product	Current result	Next action
Paid self-service alerts	K760 approved order value	Simplify USD/ZMW pricing presentation and trigger upsell at free quota limit
Featured jobs	0 orders	Sell only after direct employers start posting
Wakanda verification	2 requests; 1 approved	Bundle with CV review and Talent Pool eligibility
Talent unlocks / CV reveals	0 transactions	Do not lead with this until verified candidate supply is larger
Salary reports	No reports or purchases	Publish one Zambia pilot report after salary-data quality review
Channel sponsorship	Not yet sold	Pitch a three-month category or country-channel sponsorship pilot

6. Revenue scenarios

The forecasts below are operating scenarios based on explicit sales assumptions. They exclude tax, payment fees, refunds and staff costs. They should be replaced with cohort data once three months of consistent sales activity exists.

Monthly revenue line at 90-day exit	Conservative	Base case	Upside
Employer subscriptions / packages	K3,250	K10,800	K27,500
VIP WhatsApp alerts	K1,050	K4,000	K10,000
Career services	K1,500	K4,500	K10,500
Paid self-service alerts	K1,500	K4,500	K12,000
Featured jobs	K500	K2,500	K6,000
Reports and sponsorship	K1,000	K4,000	K10,000
Total monthly exit run-rate	K8,800	K30,300	K76,000

Scenario	Month-12 monthly run-rate	Indicative year-one cumulative revenue	Conditions required
Conservative	K20,000	K120,000	Founder-led sales, basic analytics, Zambia focus
Base case	K75,000	K450,000	Repeatable employer conversion, 2 sales/operations hires, SA launch
Upside	K180,000	K1,000,000+	Multi-country execution, sponsorships, strong retention and service capacity

7. 90-day execution plan

Period	Actions	Targets
Days 1-14	Instrument funnels; select top 200 Zambia employers; create sales script, one-page employer offer and CRM pipeline; contact first 100 companies.	20 conversations, 8 employer pilots, 25 VIP trials
Days 15-30	Deliver pilot vacancies; publish employer results reports; run candidate VIP and CV-review campaign; resolve payment/pricing friction.	3 paid employers, 30 active VIP clients, 6 career-service sales

Period	Actions	Targets
Days 31-60	Repeat employer outreach; secure one association/university/telecom pilot; launch first sponsor package; publish one salary-data sample.	8 paid employers, K15,000 monthly revenue pace
Days 61-90	Launch controlled South Africa employer outreach; document retention and unit economics; prepare investor data room.	12 paid employers, 100 VIP clients, K30,000 base-case monthly run-rate

8. Weekly management dashboard

- Revenue received by product and payment status.
- Employer leads contacted, replies, meetings, pilots, paid conversions and churn.
- Candidate registrations, CV uploads, WhatsApp opt-ins and paid conversions.
- VIP trials, paid activations, expiries and renewals.
- Career-service leads, orders, delivery time and gross margin.
- Human sessions, job-page views, registration conversion and application conversion.
- Organic employer jobs as a percentage of all new jobs.
- Crawler failures, duplicate rate and content-quality incidents.

9. Immediate decisions

- Choose employer subscriptions, VIP WhatsApp alerts and career services as the three primary offers for the next 90 days.
- Appoint one owner for daily employer outreach and one owner for candidate conversion/fulfilment.
- Stop treating raw traffic as audience size; deploy reliable web analytics and event attribution.
- Use the existing 5,403-company database for structured outreach, respecting consent and applicable communications rules.
- Review pricing after 30 paid transactions per product, not before.

Prepared from the Wakanda Jobs production database, application configuration and privacy-preserving aggregate server-log analysis as at 8 June 2026. Forecasts are scenarios, not guarantees.
