

Wakanda Jobs Partner & Investor Brief

A pan-African jobs, talent and labour-market intelligence platform

Wakanda Jobs · 8 June 2026 · Confidential

The opportunity

Wakanda Jobs aggregates current employment opportunities across African markets and is building the transaction layer around them: employer hiring products, personalized WhatsApp alerts, candidate career services, verified talent access and labour-market data.

Current proof
22,724 jobs, 15,203 jobs added in 30 days, 1,648 applications, 5,403 companies in the prospect database, K2,059 completed payment ledger and the first active employer subscription.

Why this can become valuable

- Pan-African supply: meaningful live job inventory in South Africa, Nigeria, Kenya, Zambia and other markets.
- WhatsApp-native distribution: personalized alerts meet users in the channel they already use.
- Multiple revenue paths: subscriptions, credits, premium visibility, alerts, verification, talent access, services and data.
- Data compounding: jobs, companies, candidate behavior and outcomes can become labour-market intelligence products.
- Local payment and operational workflows: online and manual-payment approval paths are already implemented.

Traction and current stage

Indicator	Actual as at 8 June 2026
Jobs in database	22,724
Jobs added in last 30 days	15,203

Indicator	Actual as at 8 June 2026
Countries represented	16
Companies identified	5,403
Registered accounts	19
Applications	1,648
Completed payments	8 totaling K2,059
Active recurring employer account	1 at K650/month
VIP WhatsApp alert records	15 total; 4 currently active

Stage assessment: early commercial validation. The technical platform is ahead of customer acquisition. The next milestone is proving a repeatable direct-employer and candidate-conversion engine.

Partner models and partner benefits

Partner type	Proposed pilot	Partner benefit	Wakanda Jobs benefit
Mobile network / fintech / payment provider	Sponsored WhatsApp jobs channel, zero-rated or bundled job alerts, co-branded youth-employment campaign	Customer engagement, transaction volume, youth-impact visibility, brand trust	Distribution, payment conversion, sponsorship revenue
University / college / training provider	Graduate jobs channel, CV clinics, employer days and placement dashboard	Graduate outcomes, student value, employer relationships and shared service revenue	Candidate acquisition, verified profiles and service sales
Employer association / chamber	Member vacancy distribution and hiring dashboard	Lower recruitment cost, wider reach and labour insights	Direct employer pipeline and subscription revenue
NGO / development institution	Youth, women, disability or regional employment campaign with impact reporting	Measurable reach, applications and labour-market reporting	Programme funding, credibility and data products
Media house / creator network	Co-branded job channel and weekly hiring content	High-frequency useful content and sponsorship inventory	Audience reach and ad inventory

Partner type	Proposed pilot	Partner benefit	Wakanda Jobs benefit
Recruitment agency / HR consultancy	Candidate sourcing, verified talent pool and overflow vacancy distribution	Faster sourcing and broader candidate reach	B2B revenue and hiring-outcome data
Corporate sponsor	Country, sector or graduate-channel sponsorship	Always-on employer brand exposure to job seekers	Recurring sponsorship revenue

Suggested pilot commercial structures

Pilot	Duration	Commercial structure	Success measures
Employer association pilot	90 days	K10,000-K30,000 sponsor fee or member subscription revenue share	Member employers onboarded, vacancies posted, applications delivered
University employability pilot	One semester	Institution fee plus 10%-25% service revenue share	Student registrations, CV reviews, interviews and placements
Telecom / fintech youth-jobs campaign	3-6 months	K50,000+ sponsorship, negotiated after scope	Opt-ins, active users, messages delivered, applications and transactions
Country or category channel sponsor	3 months	K2,000-K10,000 per month depending on reach and exclusivity	Reach, clicks, applications and sponsor recall
Labour-market report	4-8 weeks	K10,000-K100,000 commissioned project depending on depth	Coverage, insight quality, stakeholder use and renewal

What an investor would fund

A large institutional raise is premature because direct employer traction and retention are not yet proven. The appropriate near-term capital is a milestone-based angel, strategic or revenue-partner round used to prove commercial repeatability.

Use of funds	Illustrative allocation	Milestone
Sales and employer success	35%	Repeatable pipeline and 25+ paying employers
Candidate acquisition and CRM	20%	1,000+ quality registered candidates with CVs

Use of funds	Illustrative allocation	Milestone
Analytics, attribution and data quality	15%	Reliable funnel, cohort and outcome reporting
Career-service delivery and operations	15%	Predictable turnaround and positive gross margin
Country launch tests	10%	Validated South Africa or Nigeria acquisition economics
Compliance and contingency	5%	Data, messaging and content-risk controls

Suggested financing posture

First prove a K30,000-K75,000 monthly revenue run-rate and measurable employer retention. Then consider a K500,000-K1,500,000 milestone-based angel or strategic round. Avoid assigning a high valuation before retention and unit economics are available.

Investor return drivers

- Recurring employer subscription revenue.
- High-margin WhatsApp alerts and digital career products.
- Employer acquisition costs falling as the company database and referrals compound.
- Cross-selling from job distribution into candidate access, branding and data.
- Country replication using the existing crawler and social-distribution infrastructure.
- Strategic value of structured African labour-market and employer-demand data.

Key risks and mitigations

Risk	Current evidence	Mitigation
No organic employer jobs	All 22,724 jobs are crawled	Managed employer pilots and direct sales
Small owned user base	19 accounts and 4 resumes	Registration, CV upload and WhatsApp acquisition campaigns
Crawler/content dependency	Platform supply depends on third-party sources	Source permissions review, direct feeds and employer posting growth
Traffic inflation by automation	Large crawler and HTTP 410 log volume	First-party analytics and verified conversion reporting

Risk	Current evidence	Mitigation
Early revenue	K2,059 completed ledger	Milestone financing and disciplined weekly sales
Operational delivery	Career services and verification require people	Service-level agreements, vetted contractors and margin controls

12-month partnership milestones

Quarter	Commercial milestone	Evidence to share
Q3 2026	12 paying employers, 100 VIP customers, one strategic pilot	Revenue dashboard, conversion rates, partner case study
Q4 2026	25 paying employers, 500 CV-bearing candidates, first sponsor renewal	Retention, acquisition cost and service margins
Q1 2027	Second-country employer revenue and first commissioned data report	Country unit economics and report customer reference
Q2 2027	K75,000+ monthly run-rate base target	Auditable revenue, cohorts, churn and hiring outcomes

Proposed next step

Run a 30-minute partnership workshop to select one audience, one offer, one distribution channel and one measurable 90-day pilot. The pilot agreement should define data handling, branding, responsibilities, commercial terms and success metrics before launch.
